

Chassie Guard Application Guide.

Vehicle application (includes new vehicles) Download

New Vehicle application:

Step 1 underbody detergent wash

Step 2 Underbody Degrease

Step 3 Apply a light coat of Chassie Guard

Step 4 Apply a second heavy coat of Xtroll Chassie guard.

Standard Vehicle application

For any NON- new vehicle, we suggest removing as much road dirt and grime as possible.

This will then give the Xtroll a lot more surface to cover and provide a longer-lasting application.

In extreme saltwater environments Xtroll may need to be re-coated every 12 months

For best results allow 7 days final drying time before introducing the vehicle to a saltwater environment.
